

Welcome

We are proud to welcome you to our 2012 Sign Directory.

Our comprehensive range of high quality sign systems has a sign for every application and budget. From a simple plate sign mounted on one post, to the most prestigious sign featuring curved face, illumination and feature letters. We make every sign to order, exactly to your requirements – that's you sign, in your size, with your shape, in your colour and with your graphics – and at the best price.

No matter what sign or finish you select, we always offer friendly informative advice, short production lead times and great service.

We consistently work hard to provide everything you need in a sign company.

The Aluminium Traffic Signage System comprises stock, bespoke, temporary and non-highway signs. All of our standard traffic signs are manufactured in compliance with current UK regulations – BS EN 12899-1:2007 and BS 8442. Our production facility provides capacity for small one-off orders, through to large multi-sign contracts with scheduled deliveries.

Stock Traffic Signage

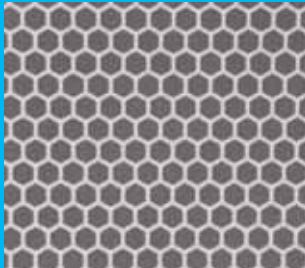

Our stock Regulatory and Warning Signs are manufactured using Class RA 2 High Intensity vinyl or Class RA 1 Engineering Grade vinyl that is pressure applied onto 3mm aluminium plate, powder coated grey on the reverse for added durability and long life. Supplied with clip extrusion on the reverse for post mounting, or without for wall mounting.

Traffic Signage to British Standards

All of our standard traffic signs are manufactured in compliance with current UK regulations – BS EN 12899-1:2007 and BS 8442.

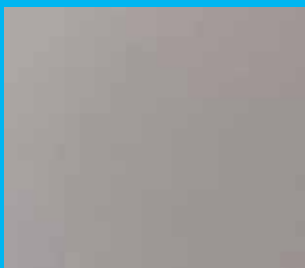

Class RA 2

High Intensity vinyl

(the old BS 873 Class 1)
The standard material for the majority of road traffic signs.

Available in white, yellow, red, blue and green and backed by a 10-12 year 3M guarantee.

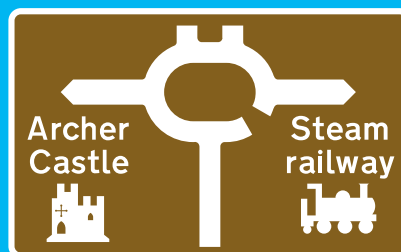

Class RA 1

Engineering Grade vinyl

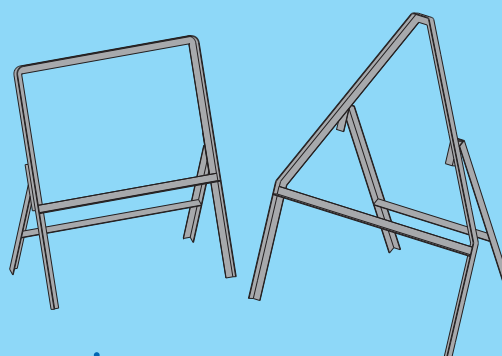

(the old BS 873 Class 2)

For use on permanent road traffic signs and delineators, street nameplates, safety markings and other everyday signing that is less critical for road users. Available in white, yellow, red, blue, green, brown and orange and backed by a 7 year guarantee.

Temporary Traffic Signage

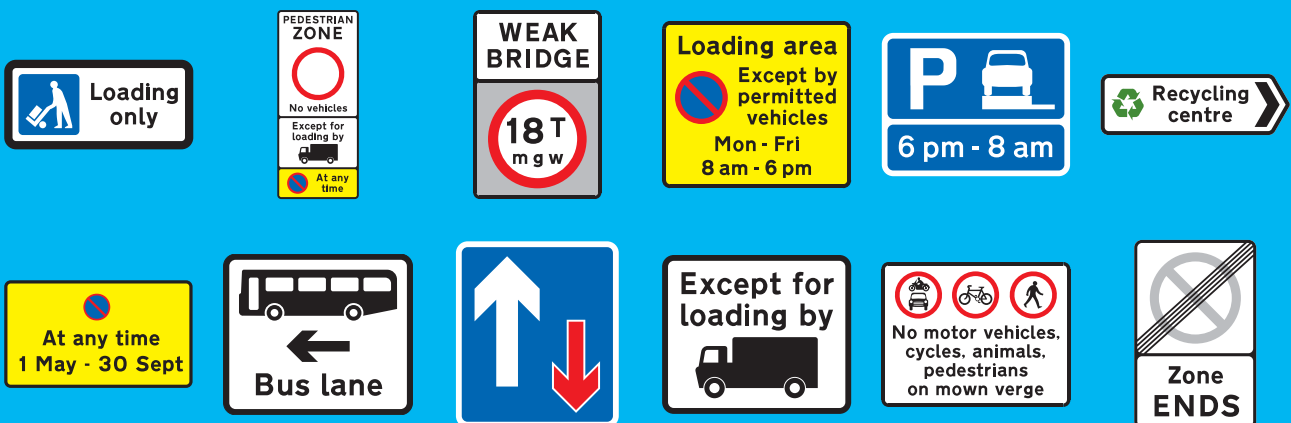

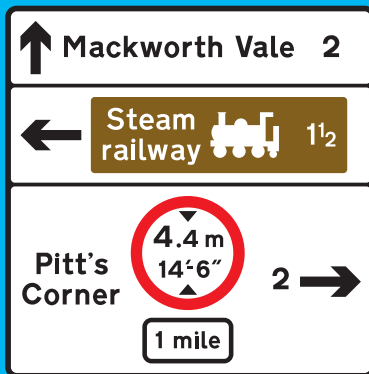

We can manufacture Temporary Traffic Signs to meet BS 8442, using Class RA 2 and Class RA 1 vinyls that are pressure applied onto 3mm aluminium plate, powder coated grey on the reverse for added durability and long life. All signs are available for post mounting or with frames. Frames are available in triangular, square and rectangular formats in various sizes.

Bespoke Traffic Signage

Our bespoke standard Traffic Signs are manufactured using Class RA 2 High Intensity vinyl or Class RA 1 Engineering Grade vinyl that is pressure applied onto 3mm aluminium plate, powder coated grey on the reverse for added durability and long life. Supplied with clip extrusion on the reverse for post mounting.

Our design team have the specialist knowledge and experience necessary to produce high quality technical working drawings that meet BS EN 12899-1:2007 and BS 8442.

Non-Highway Signage

For applications such as car parks and other non-highway locations, we can supply non-standard traffic signs for wall mounting, suspended and projecting formats to suit, as well as post mounting.

Aluminium Banding Signs

Key Facts

- Functional and low cost
- For use with existing posts
- Three stock sizes
- Durable and low maintenance

The Aluminium Banding Sign is a low cost solution.

Manufactured from aluminium plate and stocked in three sizes with radius corners. Designed for mounting with banding directly onto existing posts or lamp posts. We can manufacture other sizes with a limited width. For larger sizes please use the Aluminium Plate Signage System. Suitable for use internally or externally.

Stock Sizes

150mm x 200mm

210mm x 297mm

Aluminium Composite is the alternative material to aluminium for those who value economy as their number one priority. Composite material is less durable than aluminium, which is why we manufacture a reduced selection of signs for which this material is suitable.

Tech Spec

Material: 3mm aluminium composite sheet.
A sandwich of 0.3mm aluminium, 2.4mm polyethylene core, 0.3mm aluminium.

Size: Maximum sign size using one panel is 3000mm x 1500mm for Plate, 2950mm x 1400mm face to view for Tray.

Environment: Composite material requires specialist recycling facilities.

DIBOND® traffic

Most Aluminium Traffic signs are manufactured from aluminium to meet road traffic signage regulations. However, we also manufacture with DIBOND traffic for signs installed in high theft areas. DIBOND traffic is the only composite material approved under the same regulations.

See page 66 for the full range of Aluminium Traffic Signs.

These can also be made in any size - call with your requirements.

Available in a selection of 11 powder coated colours - see page 85 for details.

A further 200 colours are available at extra cost.

Available with grey, blue, green or red felt back panels.

Edge Lit Clip Frames

These Edge Lit Clip Frames perform as our Clip Frames with the benefit of LED illumination. Featuring environmentally friendly LED light units, power consumption is a fraction of traditional fluorescent tubes, reducing your running costs. Silver anodised finish with mitred corners, 30mm profile clip frames and 1mm protective poster cover.

Recommended for internal use.

Letters, Logos & Illumination

Key Facts

- Prestigious finishing touches
- A solution for every letter and logo
- Illumination for every application
- Suitable for internal and external use

Add finishing touches and details to your signage for increased impact. We are equipped to make a full range of letter and logo styles to enhance every sign. For maximum visibility around the clock, add whole sign lighting or feature illumination.

Letters & Logos

Tech Spec Q&A

What is the material?	Coloured vinyl
Special Features	Great for vibrant solid, metallic and reflective colours
Are there any max/min sizes?	Very flexible method – can go from our minimum recommended cap height of 15mm upwards
Range of Typefaces	If you have the typeface or logo, we can cut it
What colours can I have?	A very wide range, see Vinyl Colours on page 118
Can it be Illuminated?	With a Troughlight
Can I replace the letters?	Easy to remove and change text
Waterproof?	Yes
How durable?	5-12 years depending on colour
Can it be supplied without Signs?	Yes, on application tape

Digital Print

Letters & Logos

Tech Spec Q&A

What are the materials?	Digital print onto white, white translucent or clear vinyls
Special Features	Great for blended colours, photographs, illustrations or complex logos
Are there any max/min sizes?	No – can go from even below our minimum recommended cap height of 5mm upwards
Range of Typefaces	If you have the typeface or logo, we can print it
What colours can I have?	Our digital print process allows for an almost infinite range of colours
Can it be Illuminated?	With a Troughlight or back lit on a light frame or light box
Can I replace the letters?	No, in most cases a new digital print would be required
Waterproof?	Yes
How durable?	3 years minimum
Can it be supplied without Signs?	Yes

Tech Spec Q&A

What are the materials?	Aluminium sheet with your letters or logos cut away. Typically the aperture is refilled with acrylic
Special Features	Inset, flush and proud acrylic options together with thousands of colour combinations
Are there any max/min sizes?	Minimum of 3mm 'stroke' width, maximum only limited by finished size of sign
Range of Typefaces	You can have most typefaces, subject to size and artwork – send us your sketch or digital files
What colours can I have?	Limited only by the range of acrylic colours available and the LEDs used. For a wider range of colours, or for graduated blends, we can also apply digital print on clear acrylic
Can it be Illuminated?	Back lit with LEDs. You can also insert colour tube LEDs or flexible tube LEDs for a neon sign effect
Can I replace the letters?	No
Waterproof?	Yes
How durable?	Typically 10 years
Can it be supplied without Signs?	No

Aluminium Flat Cut Letters & Logos

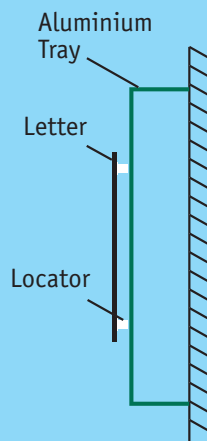

Tech Spec Q&A

What are the materials?	Aluminium, acrylic, stainless steel, foamboard, fibreglass (GRP), wood or composites
Special Features	Flush or stand-off mounted letters and logos in a wide range of materials and colour combinations
Are there any max/min sizes?	Best between 50mm and 3050mm cap height, depending on material
Range of Typefaces	You can have most typefaces, subject to size and artwork – send us your sketch or digital files
What colours can I have?	We can powder coat in 108 stock colours – see page 120. Acrylic is limited only by the range of colours available. Coloured vinyls or digital print can be applied to the face of most substrates - see pages 118 and 104
Can it be Illuminated?	With a Troughlight, or halo lit with LEDS on larger size letters
Can I replace the letters?	Yes – you replace letters to change the message or repair damage
Waterproof?	Yes
How durable?	Depends on substrate
Can it be supplied without Signs?	Yes

Tech Spec Q&A

What are the materials?	Aluminium walls with acrylic or aluminium faces
Special Features	Three dimensional letters and logos with a variety of illumination options
Are there any max/min sizes?	From 300mm cap height to the largest acrylic or aluminium sheet size available. Minimum of 30mm 'stroke' width. Available with 67mm, 124mm and 194mm walls
Range of Typefaces	We recommend a wide choice of non-serif typefaces for smaller letters, few restrictions on larger letters
What colours can I have?	Aluminium can be powder coated in 108 stock colours – see page 120. Acrylic is limited only by the range of colours available. You could also apply digital print for a wider range, or for graduated blends
Can it be Illuminated?	Choice of front face or halo lit illumination
Can I replace the letters?	Yes – you replace letters to change the message or repair damage
Waterproof?	Yes
How durable?	Typically 10 years
Can it be supplied without Signs?	Yes

Accent Illumination

Key Facts

- Low energy, long life LEDs
- Premium and economy LED ranges
- Available in a wide range of colours
- Durable and low maintenance

We use LEDs to create long life, eye catching accent illumination in Aluminium signs, building architecture or way finding installations. Choose from a wide range of economy or premium LED modules, colour tube LEDs or flexible tube LEDs dependant upon your sign design and budget.

Troughlight

Illumination

Key Facts

- Low energy, long life illumination
- Can be used with any Aluminium sign system
- Flexible and low cost
- Durable and low maintenance

Troughlights can provide illumination to any Aluminium sign. Available sized and powder coated to match your signs, providing illumination over the whole sign area.

Digital Print

Key Facts

- Great for complex images and photographs
- Wide range of substrates
- Fade resistant inks
- Durable and hardwearing

Complete your Aluminium Sign with factory applied Digital Print.

Our digital printing process involves multiple inks. When blended, these produce an almost infinite range of colours, with smooth colour blends and accurate photographic reproduction. We can reproduce the most sophisticated of designs favoured by modern graphic designers.

For best quality and most consistent results, our large format full colour digital printer is housed in a custom built clean room. High quality solvent inks are used for longest fade resistant life, and we only use the best and most durable range of vinyl substrates.

Digital Print is perfect when you want complex graphics, colour blends, or any graphics that include photographs

Ready Made Complete Sign

Mounted and trimmed on our Aluminium Sign Range.

Ready Made Glass Effect Sign

Mounted and trimmed on our Acrylic Glass Effect Signs.

Paper & Vinyl Inserts

Paper or vinyl prints for insertion into Architech, clip frames, display frames etc.

Banners

Temporary and event banners supplied with turned over and adhesive bonded seams with nickel plated eyelets.

Labels & Stickers

Profile cut and supplied on backing paper or with application tape if required.

Roll up Banners

Roll up exhibition banners printed on bright white substrate with grey light stop reverse, finished with a textured scuff resistant matt laminate.

Window Film

Window films for you to apply.

Print Substrates

We keep in stock a selected range of wide format substrates:

Substrate	Description	Maximum Width	Durable for (unprinted)
White Gloss Vinyl Metamark MD5-100	Giving high bright, tack sharp results, ideal for best possible colour on panel signs.	1550mm	7 years
Clear Gloss Vinyl Metamark MD5-105	Perfect for use on Acrylic Glass Effect Signs and non-highway road signs.	1550mm	7 years
White Matt Translucent Vinyl Metamark MD-T	For illuminated back-lit signs including Edge Lit Clip Frames, Premium Lock Light Frames and other Light Box installations. Allows diffused light to pass through giving an even illumination right across your sign.	1480mm	5 years
White Gloss Clear Vision Vinyl Metamark MD-CV2	For use in window advertising applications on buildings and vehicles. This perforated Vinyl features a 40% open area to provide one-way vision. The Black backed White faced Vinyl has a clear adhesive that ensures clean removal up to 6 months after application.	1300mm	1 year
White Gloss Static Cling PVC Metamark MD-SC	For use in promotional window advertising. This White PVC is printed on the face which when applied clings to the inside of windows. It has no adhesive so can be removed cleanly post-promotion.	1300mm	
White Satin Banner PVC Metamark MD-FL500	This premium grade PVC banner textured fabric has a satin finish and is designed for external applications.	1250mm	
White Satin Paper Metamark MD-MX	Provides vibrant colours with a 'near' photo-paper quality. This 220gsm White Paper is suitable for Architech inserts, Display Frames, Pin Board Frames, point of sale and even Edge Lit Clip Frames, Premium Lock Light Frames and other Light Box installations.	1300mm	

Laminates

To protect the printed image and provide greater durability, we seal all prints with a protective laminate.

Laminate	Description	Maximum Width
High Gloss Clear Laminate MetaGuard 705	Our most popular option which complements colours and images. This is our default finish when no laminate preference is specified.	1500mm
Matt Clear Laminate MetaGuard 702	A more subtle finish suitable for when surface reflections might be a problem.	1500mm
Frosted Clear Vinyl LG5510	The ultimate reflection free finish for use as text on Acrylic Glass Effect Signs, for discretion screening on meeting room windows, and anywhere else where translucent text is required.	1200mm
Anti-Graffiti Laminate MetaGuard 850	A special surface finish which has an increased resistance to graffiti, chemicals and abrasion. Graffiti is less likely to damage the surface and is easier to remove.	1350mm
Clear Laminate MetaGuard 670	This optically clear laminate is specifically for use with Clear Vision and provides UV and abrasion resistance.	1300mm

-----------------	--------------	----------------	------------------	-------------------	--------------------	------------------	-------------------	------------------	---------------------	-------------------	------------------------------	---------------	---------------

Profile Shape Cutting

We use a high speed cutting plotter which provides accurate cutting for both regular vinyl and for digital prints. Our cutting plotter delivers simple straight cut or circular profiles right through to sophisticated profile cutting of the most intricate shapes.

Colour Reproduction

Our digital printing process involves multiple inks. When blended, these produce an almost infinite range of colours, with smooth colour blends and accurate photographic reproduction. We can reproduce the most sophisticated of designs favoured by modern graphic designers. To give best colour consistency against other sign components, we've specially calibrated our colour digital printer for best match.

Why Solvent Inks?

Solvent inks are the best possible ink solution for digital sign printing, offering several key benefits. The pigment is bonded to the substrate and sealed in a flexible resin. As well as maximising adhesion to the vinyl substrate, this results in excellent ultraviolet light protection for long fade resistance, and gives a durable waterproof and scratch resistant finish.

Solvent inks are durable for three years but often last much longer.

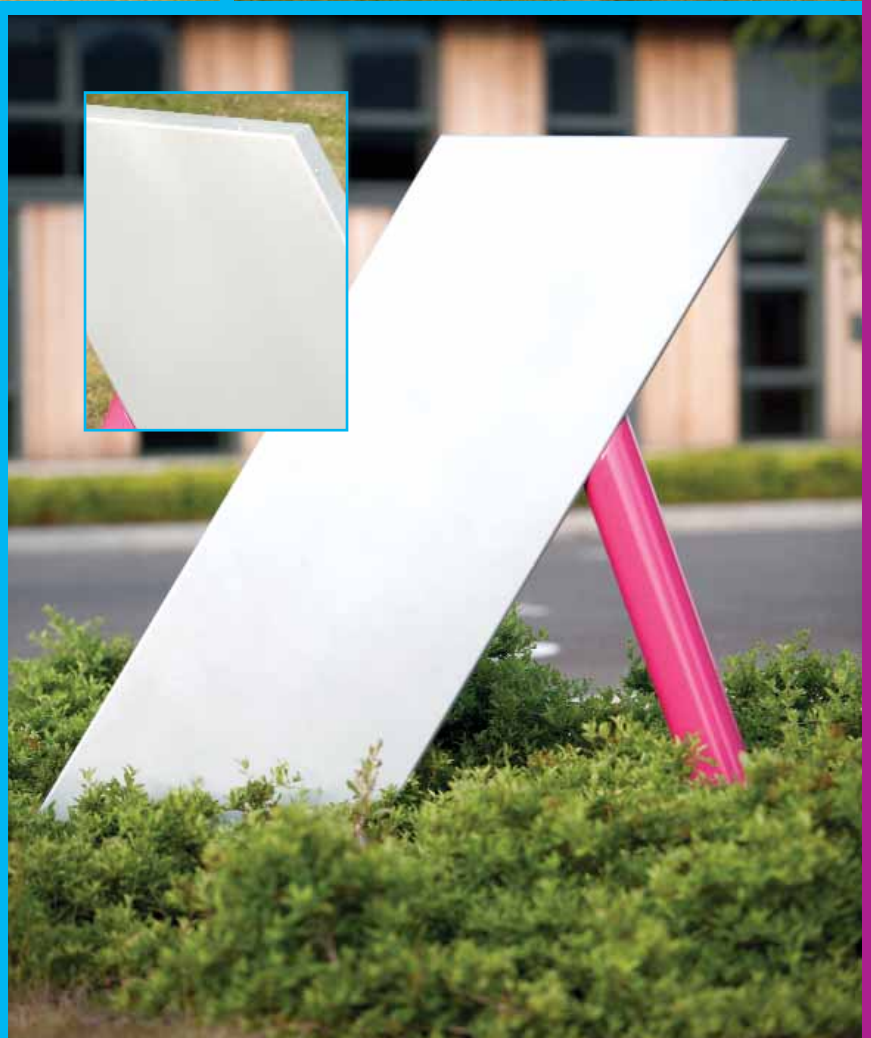

Unique Signs

We appreciate that some signage projects need to be unique, and cannot necessarily be met with our extensive sign range.

With our accumulated expertise and experience in signage design and manufacture, we will design and deliver effective CAD visuals for you. Once you've chosen the design that best fits your requirements, our factory will construct the finished sign with the same level of care and attention to detail that we apply to our range signs.

You can be confident that our design visuals, and ultimately your finished signs, will not disappoint.

Good Energy

WELCOME TO WIND FARM

Wave hello to Guinevere, Martha Thomas and Titch. Named by pupils from Delabole Community Primary School, these turbines are harnessing one of the UK's most abundant resources. Officially the bluestriest country in Europe, wind farms like this have the potential to play a major role in helping us become self-sufficient in energy.

Corwall's windy history
For over 1,000 years and as far back as the 13th century, Cornwall has been a place of wind. The wind has been a constant presence in the lives of the people of Cornwall, from the time of the first settlers to the present day. The wind has been a constant presence in the lives of the people of Cornwall, from the time of the first settlers to the present day.

Corwall's renewable future
An ideal location for all types of renewable generation, Cornwall's coastline has a long history of wind. The wind has been a constant presence in the lives of the people of Cornwall, from the time of the first settlers to the present day. The wind has been a constant presence in the lives of the people of Cornwall, from the time of the first settlers to the present day.

The turbines
There are four 2.3MW power-on-shore turbines here. With a combined capacity of 9.2MW, enough to supply around 10,000 homes - they're saving around 14,000 tonnes of CO2 from being released into the atmosphere every year. Take a look at the turbine on the right to see how these four wind turbines are generating two and half times more electricity than the largest 10.

Good Energy
Delabole Wind Farm is owned and operated by Good Energy, the UK's only 100% renewable electricity producer. It is powered using the natural power of the sun, sea, wind and water, which means no oil, gas, coal or nuclear waste. Good Energy is a 100% renewable electricity producer.

Delabole's story
Thanks to the vision of one local family, Delabole is a window onto Cornwall's greener future. Developed as an alternative to plans for a nuclear power station in nearby Looe, the wind farm began as a local idea. The Edwards family table and ended with the family selling. It's 100% wind, clean and green.

Delabole's story
Thanks to the vision of one local family, Delabole is a window onto Cornwall's greener future. Developed as an alternative to plans for a nuclear power station in nearby Looe, the wind farm began as a local idea. The Edwards family table and ended with the family selling. It's 100% wind, clean and green.

Delabole's story

Developed as an alternative to plans for a nuclear power station in nearby Looe, the wind farm began as a local idea. The Edwards family table and ended with the family selling. It's 100% wind, clean and green.

Together we can change the way the UK generates and uses energy. For good.

Good Energy

Together we do this

Vinyl Colour

All your Colour Options

The Aluminium Plate Signage System uses vinyl as its standard base coat substrate.

We have 24 stock vinyls in our Vinyl Colour range in order to provide consistency with other paint finishes. This enables you to have colour coded posts with your signs, or to mix and match sign systems while achieving a consistent corporate identity.

We can use vinyl to apply text, logos, graphics and other design features.

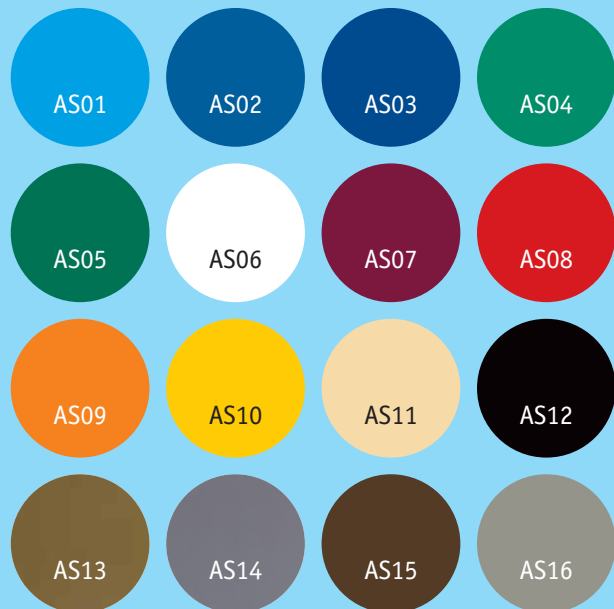

Stock Non-Reflective Vinyl

Mactac MACal 9800 Pro is a high performance polymeric calendered soft vinyl film coated with durable permanent adhesive.

Durability: White & Black – 8 years; Colours – 7 years; Metallics – 5 years.

Code	Description	Mactac Reference	RAL Reference
AS01	Light Blue	9839-10	5012

Maximum width of vinyl in one piece is 1200mm.

Signs from our range which use vinyl as base coat substrate:

- Aluminium Plate

Non-Stock Vinyl

Should you require a wider palette of colours, there are 85 extra vinyl colours in the Mactac MACal range. If we have used any of these colours before, we may hold limited quantities in house. Alternatively, we purchase these colours to meet your requirements.

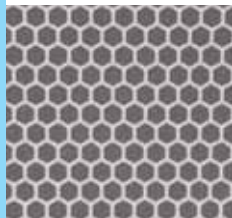

Reflective Vinyls

Stock Reflective Vinyl – Class RA 2 High Intensity Vinyl (the old BS 873 Class 1)

Typically for use on Traffic Signs, our class RA 2 vinyl is durable for 10-12 years and supplied by 3M.

Code	Description
AS17	Yellow
AS18	White

Maximum width of vinyl in one piece is 1200mm.

We hold red, blue and green vinyl in stock in limited quantities. For this reason, we refer to them as non-stock.

Stock Reflective Vinyl – Class RA 1 Engineering Grade Vinyl (the old BS 873 Class 2)

Typically for use on Traffic Signs, our class RA 1 vinyl is durable for 7 years.

Code	Description
AS19	Red
AS20	Orange
AS21	Yellow
AS22	Blue
AS23	Green
AS24	White

Maximum width of vinyl in one piece is 1200mm.

We hold brown vinyl in stock in limited quantities. For this reason, we refer to it as non-stock.

Digital Print

All your Colour Options

Our digital printing process involves multiple inks. When blended, these produce an almost infinite range of colours, with smooth colour blends and accurate photographic reproduction. We can reproduce the most sophisticated of designs favoured by modern graphic designers and agencies.

Please see page 104 for more details.

Powder Coat Colour

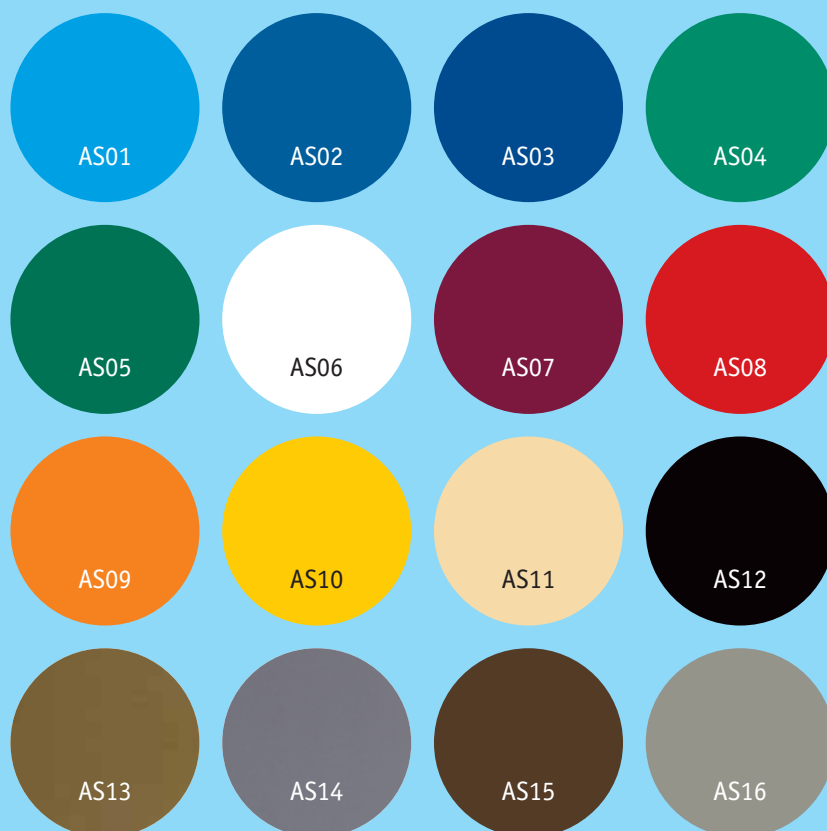

All your Colour Options

For shaped signs, extruded sign systems, posts and all sign fittings, powder coating provides a hard finish to aluminium that is tougher than conventional paint. This makes it ideal for use in exterior environments and delivers the highest levels of durability.

We currently have 108 stock colours in our Powder Coat Colour range. 16 of which provide consistency with our Vinyl Colour range. Our stock colour range regularly increases, for an up-to-date RAL reference list please ask.

Additionally, with some colours, we can deliver three depths of finish:

- Gloss (60%-80% gloss)
- Satin (30%-50% gloss)
- Matt (20%-30% gloss)
- Metallics - silver, bronze, gold with a lacquer coating

Stock Powder Coat

The 108 colours can be applied to any aluminium sign within our range. For RAL References for the stock colours not listed below please see our website.

Typically powder coat is durable for 10-15 years if installed and serviced correctly.

Code	Description	RAL Reference	Mactac Reference
AS01	Light Blue	5012	9839-10
AS02	Medium Blue	5005	9839-11
AS03	Dark Blue	5002	9839-12
AS04	Light Green	6029	9849-10
AS05	Dark Green	6005	9849-00
AS06	White	9016	9829-00
AS07	Burgundy	3004	9859-05
AS08	Red	3020	9859-04
AS09	Orange	2008	9801-04
AS10	Yellow	1023	9809-00
AS11	Cream	1014	9829-01
AS12	Black	9005	9889-00
AS13	Gold		9879-00
AS14	Silver	9006	9869-00
AS15	Brown	8017	9883-04
AS16	Grey	7042	9889-03

Signs from our range ideal for powder coating:

- Aluminium Plate
- Aluminium AS
- Aluminium Tray
- Aluminium Hooped
- Aluminium Modular
- Aluminium Architech
- Aluminium Finger
- Letters

Non-Stock Powder Coat or Wet Coat

We can 'paint' any colour to match your corporate identity – simply give us the RAL or BS colour and we can do the rest.

Depending on the size of the order, non-stock colours can be applied in one of two ways. With larger orders we purchase the powder coat colour to provide on going consistency. However, with smaller orders this can be expensive due to powder coat being supplied in bulk volumes. For smaller orders, or where cost is a premium, we 'wet coat' paint. This process gives your signs a powder coat base layer and then the top coat colour as a paint finish process.

It is important to note that the same colour will 'look' different between powder coat and wet coat finishes. Please let us know if there you have an existing sign so we can ascertain how it's finished to ensure the best possible colour match.

Wood Finish

All your Colour Options

Wood finish powder coats offer the warmth and texture of hard wood combined with the durable properties of aluminium. All this, at a fraction of the price of hard wood - delivering a winning combination.

Wood Finish Powder Coat Range

Our six wood finishes can be applied to any aluminium sign within our range.

Typically wood finish powder coat is durable for 10-15 years if installed and serviced correctly.

Code	Description

Shape Options

for Plate Signs & Trays

Add sophistication and creative impact to your signs by shaping the edges and adding shapes. From radius corners, to complex shapes, to add-ons, we have a solution to make your signage stand out.

Radius Corners

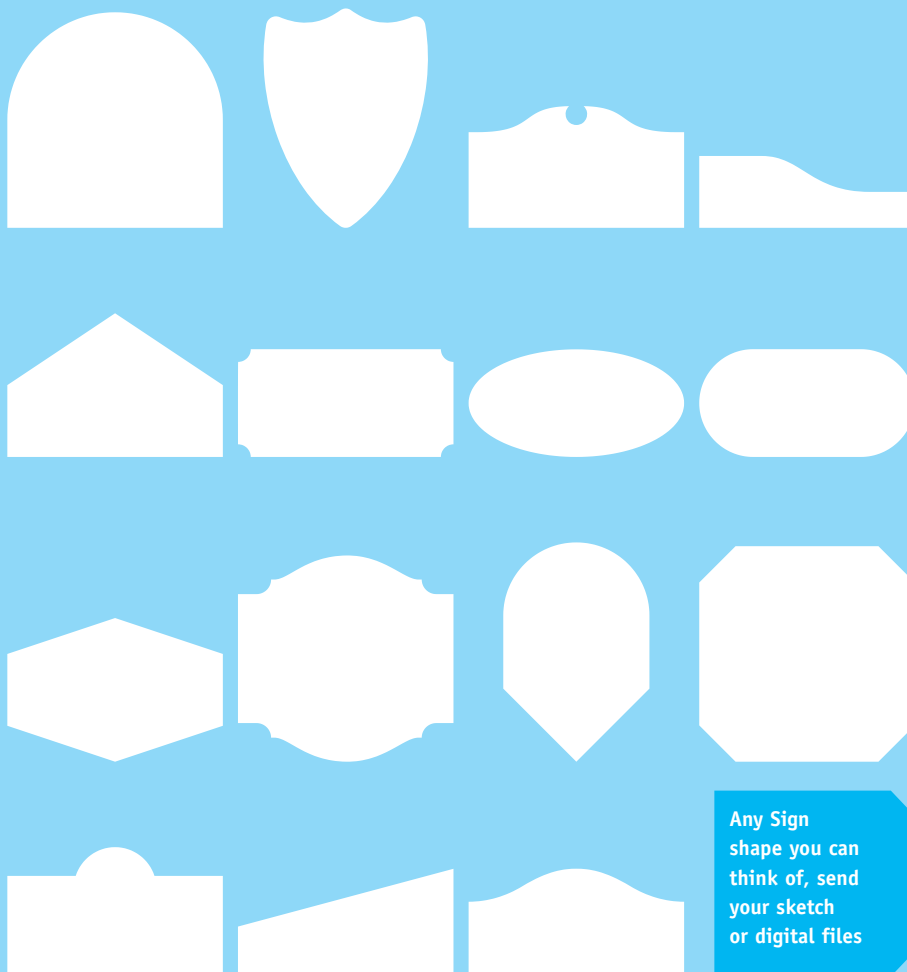

Our entry-level solution is removing sharp points with our automatic corner press. Available in six radius sizes, each delivers smooth round corners. Standard radius corners are 10mm, 12mm, 20mm, 25mm, 38mm and 50mm.

Bespoke radius sizes can be delivered using our shaping service. Radius Corners can be specified for Aluminium Plate and Aluminium AS Signs.

Shapes

Use our shaping service to create exactly the shape of sign you want. From simple profile shapes to highly complex shapes which follow your graphics.

Signs from our range ideal for shaping:

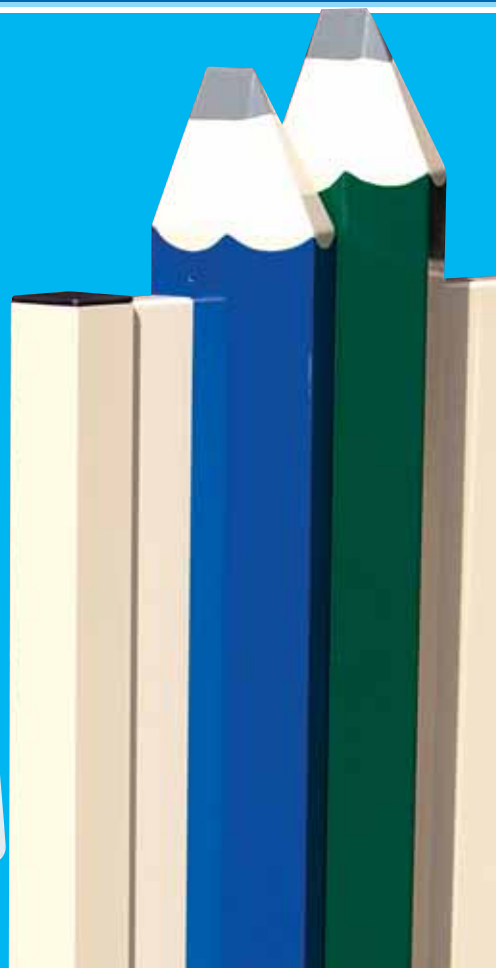

- Aluminium Plate
- Aluminium AS
- Aluminium Tray
- Aluminium Hooped
- Acrylic Glass Effect

Any Sign shape you can think of, send your sketch or digital files

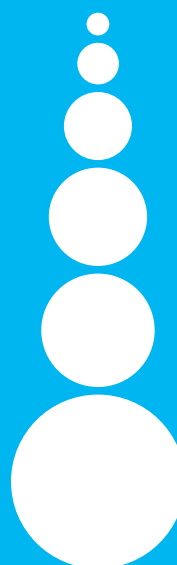

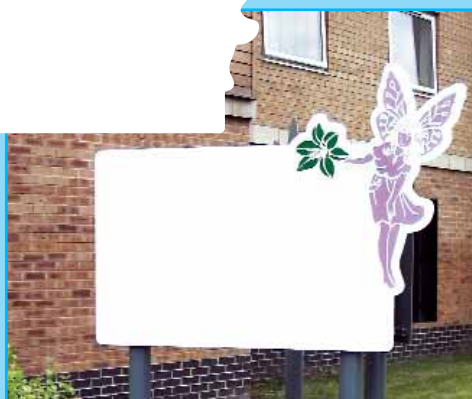

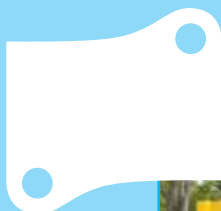

Add-on Shapes

Create extra dimension and stylish impact to your signs with add-on shapes. These can range from simple geometric shapes, through to sophisticated profiles. Add-on shapes can be contained within or extend beyond the main sign, and can be different colours to accentuate the design.

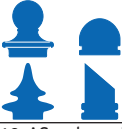

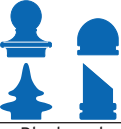

Punched Fixing Holes

Six standard hole sizes (3mm, 5.5mm, 9mm, 13mm, 15mm or 23mm) can be pre-punched for fixings.

Bespoke Finial Add-ons

A profile, silhouette or logo of your choice can be precision cut from high quality 3mm aluminium and permanently integrated into a dome finial.

Excellent for customising your signs, or on their own on top of a post for wayfinding or building identification markers.
